## “Hook” With Fungicides

CL#17

Mr. Larry Bishop, a Field Representative and Certified Crop Advisor with Taylor And Stuckey Co. in Trumann, AR., told us that he has been using **HOOK**® with **Headline**® by BASF.

He uses **Headline**® at the rate of 6 ounces per acre. He adds **HOOK**® at the rate of 1 quart per 100 gallons of tank mix and applies this to corn and soybeans.

Larry said he likes **HOOK**® with **Headline**® because it increases sticking and spreading on the leaves and increases penetration of the fungicide into the leaves.

**HOOK**® also increases penetration of the spray mix into the canopy of the crop to give more coverage on the lower leaves. Next week Larry said they would be applying this same product at the same rate on cotton.

Larry said they also have been using **HOOK**® with **Quilt**® which is a Syngenta fungicide on corn with the same results. We would very much like to thank Mr. Bishop for sharing his results with us.
